

ABSTRACT OF THE INVENTION

A tool set for disassembling car audio devices has two handles and two tool assemblies, wherein each of the two handles has a chamber capable of being pivoted with each of the two tool assemblies therein, and
5 each of the two tool assemblies is composed of a plurality of tool members of different types, by which the tool set of the present invention is convenient in carrying by having the tool members of different types pivoted and stored together in the two handles, and is easy in operation only by holding the two handles to employ the tool members to
10 disassemble car audio devices from vehicles quickly.
